

Assignment 4[10].

Consider the following situation.

| | Labs | Assignments | Final | Project | Decision |
|---|------|-------------|-------|---------|----------|
| 1 | All | Poor | Good | Average | Pass |
| 2 | Some | Good | Good | Good | Pass |
| 3 | Some | Poor | Poor | Good | Fail |
| 4 | All | Good | Good | Good | Pass |
| 5 | Some | Poor | Good | Average | Pass |
| 6 | Some | Poor | Poor | Good | Fail |
| 7 | Some | Good | Poor | Good | Pass |
| 8 | Some | Good | Poor | Average | Fail |
| 9 | All | Poor | Poor | Poor | Pass |

Draw a decision tree by selecting the attribute with the highest gain ratio at each step. Show all your work.

$$\text{Entropy (D)} = - \frac{6}{9} \times \log_2 \left(\frac{6}{9} \right) - \frac{3}{9} \times \log_2 \left(\frac{3}{9} \right) = 0.918$$
